Decodable HFWs
Phonics Digital Slides

186 DECODABLE WORDS - 1,115 SLIDES

©Tara West - Little Minds at Work

What Are Decodable Words? Decodable words are words students can read by applying the phonics skills they have already learned. Unlike heart words, which may contain unexpected or not-yet-taught spellings, fully decodable words follow familiar sound-spelling patterns. Rather than memorizing words as whole visual units, students use their knowledge of letter-sound correspondences to segment, blend, and read each word.

A Spiraling Approach to Decodable Words The words in this resource follow the Guided Phonics + Beyond scope and sequence. Each word is intentionally selected to align with previously taught phonics skills, allowing students to apply what they know while building reading fluency. As students progress through the phonics scope and sequence, they encounter increasingly complex words while continuing to review and apply previously learned sound-spelling relationships. This spiraling approach reinforces foundational skills and supports the development of automatic word recognition through repeated, successful decoding.

About These Digital Slides These slides are intentionally static. There are no animations, moving pieces, or automatic answers. The slides provide the visual demonstration while the teacher guides instruction and students do the thinking! Students can use a personal whiteboard or writing surface alongside the slides. As they analyze each word, students circle stars on their own board to represent the number of sounds they hear. They then map the sounds to their corresponding letters using the sound boxes provided. Students continue interacting with the word by locating it among other decodable words, reading it within sentences, and reviewing its sounds and spellings.

An Add-On to Your Phonics Instruction These slides are designed to supplement explicit, systematic phonics instruction, not replace a phonics curriculum. Decodable word practice is most meaningful when students apply sound-spelling relationships they have already been explicitly taught. If you use Guided Phonics + Beyond, the words align with that scope and sequence. If you use another phonics curriculum, select words that correspond to your students' previously taught phonics skills. The goal is to provide meaningful opportunities for students to apply their decoding knowledge with increasing accuracy and automaticity.

The 6-Slide Routine Each decodable word includes six slides that follow the same predictable routine:
Slide 1: Meet the Word Introduce the new decodable word. Students look at the word, say it aloud, and begin thinking about the individual sounds they hear.
Slide 2: Count the Sounds Students segment the word and determine how many sounds they hear. On their own board, students circle the corresponding number of stars. Remember, the stars represent sounds (phonemes), not letters!
Slide 3: Map the Sounds Students segment the word and connect each sound to its corresponding spelling. Using the sound boxes displayed, students write the grapheme or graphemes representing each sound on their own boards. Reinforce that some sounds may be represented by more than one letter.
Slide 4: Search + Find Students search for and locate the target decodable word among other familiar words. Encourage students to attend to the letters and sound-spelling patterns rather than relying on the overall appearance of the word.
Slide 5: Read It in Context Students read two sentences containing the target decodable word, moving from reading the word in isolation to applying their decoding skills within connected text.
Slide 6: Review + Recall Finish with a quick review. Students read the target word and recall the number of sounds.

Teacher Tip Keep the routine active! Students should be saying sounds, segmenting words, mapping phonemes to graphemes, blending sounds to read words, writing, and responding throughout the slides. Encourage students to decode each word rather than guess or memorize it. Continue revisiting previously taught words to strengthen automatic recognition and reinforce spiraling phonics skills. Teacher-guided instruction and active student participation are what bring the routine to life.
